

After last year's issues, our directors made significant corrections:

- We removed portions of the deck around the wading pool, found the leak and repaired it. We also updated the return jets.
- We removed all the decking around the spa, removed all the plumbing, and replumbed the spa from scratch. We updated the return jets and the power jets and smoothed out the interior walls. Finally, we installed a new blower pump to enhance the "jet action" of the spa.
- On the big pool, we removed the strainer, pump, and motor, and replaced them with a bigger, 7 ½ hp pump and motor. We also installed a variable speed drive to give us more control over the circulation system.

As soon as we are comfortable the freezing weather is behind us, we plan to fill the pools and operate them to be sure everything is working right. On Saturday, May 11<sup>th</sup> we want to have a soft opening, putting our new equipment to work with bathers. From May 11 to May 24 we will be working with limited staff, often with no one on duty.

We will use this website and Facebook to keep you up to date.
